

## NUMBERS and SYMBOLS

I'm going to give you four numbers: 2, 3, 4, and 5.  
And they're not Roman numerals, they're the regular old Arabic numerals with which we're all familiar.

You also get two math symbols, a plus sign (+), and an equal sign (=).

Now, make an equation using all the numbers and the one + and one =

You might say, "This is easy!"  $5+2=3+4$   
But, you're using two plus signs, and you're only allowed to use one. Remember you have is:

2      3      4      5      +      =

Create an equation using each number and symbol once!

---

Scroll down for the solution (you won't like it!)

$$4+5=3^2$$
