

# Pizza Fundraiser

You're going to have a huge pizza sale for your school to raise money for the Red Cross.

You will offer two types of pizza crust:

- Thin Crust pizza
- Thick Crust pizza

You will offer three different toppings:

- Sausage
- Pepperoni
- Mushrooms

Pizzas are sold with Thin or Thick Crust and ONE topping per pizza.

---

How many different types of pizza are you offering?

Create a pizza sketch showing all of the available combinations:

If you add another choice of topping (Black Olives) how many different types are you offering now? Explain your answer.

Create another example that uses this math concept.
